	The 'INTRODUCTION' section clearly describes the relevant	
	background information for the study. Only the most relevant and	
	current (within the past 5 years) literature is cited, with the	
	exception of rare instances of seminal literature citations. All	
	technical terms and/or abbreviations are explained and/or defined,	
15	with the full name of abbreviations given upon first appearance in	[NI]
15	the text and the abbreviation presented in parentheses [i.e.,	[ N ]
	"computed tomography (CT)"]. First-person pronouns (e.g., 'I',	
	'we') are used appropriately to clearly indicate the work performed	
	by the author(s). When weaknesses of previous studies are	
	described in the text to highlight the innovations related to the	
	current study, the information is presented carefully.	
	The 'MATERIALS AND METHODS' section clearly and accurately	
4.0	describes all materials and methods used to obtain the data	
16	presented in the article and is adequate for a reader to repeat the	[ N ]
	study.	
	The 'RESULTS' section concisely describes the observational and	
	experimental results. Representative data and data that have	
17	scientific significance are emphasized. Data is presented in either	[N]
	the text, a table or figure (i.e., chart, diagram, graph or image), but is	
	not repeated among each. Information presented in the tables and	
	figures clearly describes the trends, meaning, and inferences.	
	Results described in textual form are accurate, concise and clear.	
	Statistical symbols are accurate. Statistical significance is expressed	
	as ${}^{a}P$ < 0.05, ${}^{b}P$ < 0.01 ( $P$ > 0.05 usually does not need to be denoted).	
18	If there are other series of $P$ values, $^cP$ < 0.05 and $^dP$ < 0.01 are used,	[N]
	and a third series of $P$ values is expressed as $^{\rm e}P$ < 0.05 and $^{\rm f}P$ < 0.01.	
	Statistical data is expressed as mean $\pm$ SD or mean $\pm$ SE.

The 'DISCUSSION' section (1) describes the main purpose and hypothesis of the study: (2) summarizes the most important results; (3) illustrates and explains the results (but does not simply repeat the data) and draws conclusions or inferences based on the results; (4) points out the limitations of the study and their impact on the results, as well as proposes further advice on future research topic(s) or direction(s); and (5) describes the theoretical significance and practical value of the findings.  The 'ACKNOWLEDGEMENTS' section expresses gratitude to any individuals or organizations for technical support (i.e., providing instrumentation, equipment or experimental materials, and/or assistance in experimental work), non-technical services (i.e., useful inspiration, suggestions, guidance, or review), and/or any other auxiliary work.  The 'ARTICLE HIGHLIGHTS' section provides comments for original articles in accordance with the specified format.  The 'REFERENCES' section lists the references in the Vancouver style. This style uses Arabic numeral in-text citations based on the order of the first appearance of a source in the text. For citations where the author's name is indicated in the text, a superscript number should be placed following the name (i.e.,, "Pang et al"). For citations where no author is indicated, a superscript number should be placed at the end of the sentence. Respective examples are: "Mal"! reported", "Pan et all <sup>2-3</sup>   indicated, a superscript number should be placed at the end of the sentence. The style of reference citations in tables is the same as that in the text (e.g., Pan et all <sup>2-3</sup> ), please see reference [8]).

Journal references have been verified to ensure that there are no duplicate references and that the PMID numbers are correct. For references not yet included in PubMed: the name of Chinese journals is spelled out using Chinese Pinyin, with the first letter of each word capitalized (e.g., Shijie Huaren Xiaolua Zazhi); the name of journals in other languages are listed according to indexing information retrieved from Google. Book references are presented with all the information relevant to the electronic version.  The number of cited references is appropriate for the article type, as follows:  Commentary: no less than 50; Review: no less than 30/26; Case Report and Letter to the Editor: no less than 1.
