

Dear Editor and reviewers,

I have revised the manuscript according to the opinions of the two reviewers and followed the standard.

1.rslDs information was added as requested by the first reviewer, making the form larger. That's why it's in the supplement file.

2.We further discuss the function of the screened mutant gene and its effect on the disease.

3.The specific number of days taken and symptoms were added to the introduction.

4.The names of all genes are italicized.

5.Added how to collect and preserve specimens.

The language has been reworked for publication.

Best wishes

Your Dr song
