SPECIFIC COMMENTS TO AUTHORS

The authors reported an interesting case of primary myelofibrosis with thrombophilia as the first symptom combined with thalassemia and Gilbert syndrome. There are a few major issues that should be addressed by the authors before consideration for publication: ----- 1. The authors should explain how their findings make a difference for the readers of the World Journal of Clinical Cases? 2. Improvements to the English language within your manuscript are requested. More minor issues that should be addressed include: 3. Abstract, line 2, the word “regular” doesn’t seem to fit this context. Consider changing it with “regularly” 4. Abstract, line 8, it appears you have attempt to use the intransitive verb “existed” in a passive voice construction. Consider writing the sentence in the active voice. 5. Case report, History, line 7, the spelling of “diarrhea” is a non-American variant. For consistency, consider replacing it with the American English spelling “diarrhea” 6. it seems that “antibody” may not agree in number with other words in this phrase. Consider changing it with “antibodies”.
