SPECIFIC COMMENTS TO AUTHORS

1 Title. Does the title reflect the main subject/hypothesis of the manuscript? I think the title is too long. That's why I recommend shortening it. 2 Abstract. Does the abstract summarize and reflect the work described in the manuscript? It is prepared just like a review. Therefore, it should be rewritten according to the case report format. 3 Key words. Do the key words reflect the focus of the manuscript? It is appropriate to the content of the topic. 4 Background. Does the manuscript adequately describe the background, present status and significance of the study? Looking at the WJCC manual, it appears that the introduction should begin with "Introduction" 5 Methods. Does the manuscript describe methods (e.g., experiments, data analysis, surveys, and clinical trials, etc.) in adequate detail? Case reports were written in an appropriate format. However, subheadings should be written in bold font. 6 Results. Are the research objectives achieved by the experiments used in this study? What are the contributions that the study has made for research progress in this field? The case report is appropriately written. 7 Discussion. Does the manuscript interpret the findings adequately and appropriately, highlighting the key points concisely, clearly and logically? Are the findings and their applicability/relevance to the literature stated in a clear and definite manner? Is the discussion accurate and does it discuss the paper's scientific significance and/or relevance to clinical practice sufficiently? The word "synovial chondromatosis" is used almost entirely in the introduction. However, the discussion part started with the word "synovial osteochondromatosis". If these two words are the same, please use only one to avoid confusion. 8 Illustrations and tables. Are the figures, diagrams and tables sufficient, good quality and appropriately

illustrative of the paper contents? Do figures require labeling with arrows, asterisks etc., better legends? Appropriate images was used. image quality should be improved 9 Biostatistics. Does the manuscript meet the requirements of biostatistics? Biostatistics is not required for this case report. 10 Units. Does the manuscript meet the requirements of use of SI units? 11 References. Does the manuscript cite appropriately the latest, important and authoritative references in the introduction and discussion sections? Does the author self-cite, omit, incorrectly cite and/or over-cite references? I suggest updating the references
