Dear editor,

Please find attached files of revised manuscript in word format

**Title: Clinical Study of a Preventive Online and Offline Health Management Intervention in Polycystic Ovary Syndrome**

**Author:** Rui Liu, Min Li, Pei Wang, Man Yu, Zheng Wang, Guangzhong Zhang

**Name of Journal:** World Journal of Clinical Cases

**Manuscript NO:** 70865

First of all, thank you for your careful guidance of this article. Revision has been made according to the suggestions of the reviewer:

**Reviewer:** 06099539

In recent years, with the acceleration of social changes, the incidence of PCOS in women of childbearing age is increasing due to the influence of high work-related pressure, irregular lifestyle, insufficient sleep, being overweight and other factors. Rui Liu et al. investigated the clinical effect of an online and offline (O2O) preventive health management model on PCOS with kidney deficiency and phlegm dampness. The article is well written, and the idea of the study is novel. The text is strictly logical. The results are interesting and they found the effect of preventive O2O health management model on PCOS patients is greater than simple basic treatment, and has significant advantages in improving clinical symptoms and outcomes. The manuscript provided a theoretical basis for clinical treatments and could be useful for other studies in this field. I recommend that the manuscript can be published.

**Reviewer:** 05820820

I found the manuscript entitled “Clinical Study of a Preventive Online and Offline Health Management Intervention in Polycystic Ovary Syndrome” original, very interesting, well-structured and with huge impact on clinical treatments. The manuscript is well designed and written. The introduction gives a good overview about the topic and the procedures are precisely described. The results were well discussed. However, some issues have to be addressed: a. The background part can introduce more related knowledge of online and offline, so that readers can have more understanding of it. b. Discussion paragraph could be expanded to underline the clinical application of this study and the potential limitations. Also, directions for future research could be discussed.

Thank you for your advice.

After receiving the comments, We read the article in detail, introduced more related knowledge of online and offline in the background part. In the discussion part we further emphasized the clinical application and potential limitations of this study, and discussed the research direction in the future. Thank you again for publishing our manuscript in the World Journal of Clinical Cases.

Sincerely Yours,  
Guangzhong Zhang
