

Reviewer #1:

Scientific Quality: Grade B (Very good)

Language Quality: Grade A (Priority publishing)

Conclusion: Accept (High priority)

Specific Comments to Authors: Please describe in more details surgical techniques as to what kind of incision performed and tissues/muscles/vessels dissected. Please provide photographical images of the patient to allow better educational opportunity for learning from the material

Answer: This is a good suggestion. I have described the surgical technique in detail in the first paragraph of the treatment section, including surgical incision and anatomical tissue/muscle/vascular. And provide the patient's intraoperative photos in Supplementary Figure 1.

Reviewer #2:

Scientific Quality: Grade B (Very good)

Language Quality: Grade A (Priority publishing)

Conclusion: Minor revision

Specific Comments to Authors: Please see the attached word file for comments to the authors. (The manuscript is well-written, readable, and informative. I recommend acceptance for publication. However, authors might need to include (i.e., cite) the article below in their discussion section...)

Answer: I have cited this article (No. 10) in the third paragraph of the discussion section. This article is worth quoting because the patients in the article have similar underlying diseases and have the same pathogenic infection. Thanks for your advice.
