Title of the study:

Validation Model of FIB-8 Score to Predict Significant Fibrosis Among Patients with Nonalcoholic Fatty Liver Disease in the Asian Population (Manuscript No.71602).

I have reviewed this manuscript and agree that the statistical methods for comparing the AUROC are appropriate. I also reanalyzed the AUROC data using different statistical analysis software, and I obtained the same results as the authors.

This letter is to confirm that I have read the full manuscript and that in my opinion, the statistical methods and techniques are appropriate.

Yours sincerely
