SPECIFIC COMMENTS TO AUTHORS

The authors present a rare case of colo-colonic intussusception with PPES in a female with no significant previous medical history. Though looking a simple case, it is quite interesting, well prescribed with good language and clear conclusion raising the importance of combining a clinical scenario with a radiological finding to achieve a differential diagnosis and correct management plan.

SPECIFIC COMMENTS TO AUTHORS

I have the following comments about this manuscript. 1. Since the patient received the procedure at another hospital, the authors mentioned that they did not know the detailed information about the manipulation. I strongly suggested the authors to acquire the images during the procedure of polypectomy and add detailed information from another hospital. Besides, did you think the swelling change of right side colon wall might be caused by submucosal injection before electrocoagulation and polypectomy? Please add this in you text. 2. Please add your opinion or information from the literature to inform the readers how to prevent this complication and the best strategy to manage it. 3. About the occurrence of intussusception in this case, did you think it may be caused or aggravated by the procedure of "SUCTION" at the end of the procedure to deflate the distended colon. 4. Originality is the first priority in the preparation of manuscript submission. I have checked the plagiarism and the similarity rate is 46%. This is the main cause of rejection.

SPECIFIC COMMENTS TO AUTHORS

The case is interesting, but not attractive enough.
