### **SPECIFIC COMMENTS TO AUTHORS**

The inflammation of the disease occurs mostly in the colonic mucosa and submucosa, usually involving the rectum first, then spreading to the entire colon. Typical clinical manifestations of the disease include mucopurulent bloody stools, abdominal pain, diarrhea, etc. This study reported a rare case of ulcerative colitis leading to diffuse infiltrating signet ring cell carcinoma of the colorectum, and review the relevant literature studying the disease. This case was described very detail with a rich discussion. The manuscript is well written. The reviewer suggests to accept this case report after a minor language editing. Thank you.

### **SPECIFIC COMMENTS TO AUTHORS**

A well written case report of diffuse infiltrating signet ring cell carcinoma of the colorectum. The study is very interesting, and the manuscript is written very clear. The tables and images should be moved to the end of the text.
