World Journal of Clinical Cases

Dear Editor Wang,

We are glad to receive the letter from you. I would like to thank you for the quick handling of our submission and the reviewers for thoughtful comments and suggestions to improve our manuscript. We have gone through all the comments and made some modifications in accordance with the reviewers' suggestions. Here we revised our manuscript entitled "A Successful Individual Endodontic Treatment of Severely Curved Root Canals in Mandibular Second Molars: A Case Report" (Manuscript ID: 73020). All changes have been marked in red in the revised manuscript. Point-by-point responses to reviewers are in the following text. We hope that our responses are adequate and fulfilling to persuade you to accept the revised manuscript for publication in "*World Journal of Clinical Cases*".

Point-by-point responses:

Reviewer #1:

I would like to comment on what you said in your conclusion "In conclusion, a thorough understanding of tooth and root canal morphology by CBCT during preoperative assessment is highly important": For me you have to add "in complicated cases", otherwise you are not respecting the ALARA regulatory guidelines.

Response: Thanks for your suggestions.

1) We have added "in complicated cases" in the conclusion part, which was marked in red in the manuscript. (Page 8)

Thank you for your consideration. I look forward to hearing from you.

Sincerely,

Zhuxiang Wang
