

## PEER-REVIEW REPORT

**Name of journal:** *World Journal of Hepatology*

**Manuscript NO:** 73092

**Title:** Polymorphism AGT2 (rs4762) is involved in the development of dermatologic events: Proof-of-concept in hepatocellular carcinoma patients treated with sorafenib

**Provenance and peer review:** Invited manuscript; Externally peer reviewed

**Peer-review model:** Single blind

**Reviewer's code:** 05391966

**Position:** Peer Reviewer

**Academic degree:** PhD

**Professional title:** Professor

**Reviewer's Country/Territory:** China

**Author's Country/Territory:** Spain

**Manuscript submission date:** 2021-11-09

**Reviewer chosen by:** AI Technique

**Reviewer accepted review:** 2021-11-17 02:19

**Reviewer performed review:** 2021-11-20 03:04

**Review time:** 3 Days

### **SPECIFIC COMMENTS TO AUTHORS**

Title: Reflects the content of the study Abstract: Well written Introduction: Well written  
Materials and Methods: Very complicated. Especially a third party reader get lost while trying to figure out the study design process. I recommend a flow chart to tabulate the functions of the individual cohort Results: Although the results seems striking, the authors show absolutely no data regarding response to therapy, recurrences, OS and DFS of the patients. Although the SNPs' that are being studied correlate with AHT and the dermatologic adverse event, the manuscript is structured around response to treatment and the reader expects these results. Furthermore, the results section is equivocally complex and very hard to understand. Discussion well written Tables and figures are sufficient The ethical guideline have been followed and the manuscript is written according to the guidelines of the journal
