

## PEER-REVIEW REPORT

**Name of journal:** *World Journal of Clinical Cases*

**Manuscript NO:** 73247

**Title:** Effect of intraoperative cell rescue on bleeding related indexes after cesarean section

**Provenance and peer review:** Unsolicited Manuscript; Externally peer reviewed

**Peer-review model:** Single blind

**Reviewer's code:** 06140359

**Position:** Peer Reviewer

**Academic degree:** MD

**Professional title:** Doctor

**Reviewer's Country/Territory:** India

**Author's Country/Territory:** China

**Manuscript submission date:** 2021-12-01

**Reviewer chosen by:** AI Technique

**Reviewer accepted review:** 2021-12-06 10:43

**Reviewer performed review:** 2021-12-13 09:29

**Review time:** 6 Days and 22 Hours

### **SPECIFIC COMMENTS TO AUTHORS**

This is an interesting study of the influence of Intraoperative Cell Salvage on indications related to amniotic fluid embolization in puerpera. The study is well designed and the results are interesting. The reviewer suggests to accept this manuscript after a minor editing.

### **SPECIFIC COMMENTS TO AUTHORS**

Timely and rapid blood transfusion is the key to the successful rescue; however, traditional allogeneic blood transfusion has safety problems such as blood shortage, transfusion-related infection and immune suppression. Based on different sources, autologous blood transfusion is divided into storage type of autologous blood transfusion, diluted autotransfusion and recycling of autologous blood transfusion, the IOCS type is widely used. In this study, the authors discussed the application of IOCS in cesarean section, monitoring amniotic fluid embolization and other related indications, demonstrating its safety in cesarean section. The manuscript is very well written. Comments: 1. Some minor language polishing should be corrected. 2. The tables and references should be edited. 3. The limit of the study should be listed and discussed.
