SPECIFIC COMMENTS TO AUTHORS

Congratulations for providing such a large batch of patients with Stress Cardiomyopathy, a situation not common to ICUs. Also, the study design and management are commendable.

SPECIFIC COMMENTS TO AUTHORS

1.The retrospective observation study is about a case series of patients with stress cardiomyopathy (SC) which is often under-recognized. It firstly reports and compares incidences, characteristics, complications and outcomes of SC stratified by the type of units (CCUs and MSICUs). When patients develop sudden or worsening unexplained hemodynamic instability, arrhythmias or respiratory failure, intensivists should have a high index of clinical suspicion for SC. 2.The title reflects the main subject of the case report well. The abstract summarizes and reflects the main subject of the study. The key words reflect the focus of the manuscript. 3.The manuscript adequately describes the background, present status and significance of this study. 4.The authors should correct/rewrite some words: all “underrecognized” and “underreported” may be corrected to “under-recognized” and “under-reported”. 5.Line 34, “49” should be corrected to “forty-nine”. L 40, “needing” should be corrected to “needed”. L 211, “echocardiographc” should be corrected to “echocardiographic”. L 247, “Point of Care Ultrasound” should be deleted. 6. In Fig. 1, is it "day" or other things for "time for diagnosis" ? 7. References are sufficient. 8. The manuscript is well, concisely and coherently organized and presented. 9. The manuscript met the requirements of biostatistics and ethics.
