This is a very interesting case report describing a very rare histologically proven tumor (EES) and is worth reading. However, its description is very poor, and is not acceptable for publication in the present form. Major point English: Poor. To be revised. If not, we cannot understand the detail. Minor points a) Case presentation: Addition of detailed immunochemical histologic results of tumor will help understand the readers the intention of the authors. Description of imaging results is not accurate. Please revise it (e.g.: P5, Ls9, enhanced posterior acoustics → posterior echo enhancement). b) Discussion: Please compare the present case with previously reported ones in detail. c) References: See "Instructions for Authors".

SPECIFIC COMMENTS TO AUTHORS

Authors did an appreciable work of documenting this case describing its rarity and reviewing literature, however there are certain grammatical and language corrections required. The authors might have mistakenly uploaded the consent document instead of language expert certificate.
