Pisa, 18 December 2021

To whom it may concern,

The manuscript "Applications of artificial intelligence in Lung ultrasound: review of deep learning methods for COVID-19 fighting" by De Rosa et al. has been carefully revised by all the authors. Despite none of us is native speaker of English language, we are confident that the long experience gained by some of us in writing and publishing scientific articles in English can guarantee the manuscript a proper English language and overall style.

Should you require any additional information, please do not hesitate to contact me.
