#### **SPECIFIC COMMENTS TO AUTHORS**

Eyelid reconstruction tends to be complex, difficult and can be needed after oncological surgery or trauma. This work comprehensively, objectively and impartially summarizes the major surgical methods in current. Surgical options in some special cases are not mentioned, For example, does not describe the survival of skin flap transplantation in some patients after local radiotherapy. After local radiotherapy, the local blood supply and other conditions may change significantly, and many surgical options are not appropriate. In my opinion, the addition of this section may enrich the article.
