#### **SPECIFIC COMMENTS TO AUTHORS**

Good manuscript, concise. Title: Okay Abstract: 1. "The patient was uneventfully discharged, and follow-up 2 wk later showed no evidence of rebleeding." modify 2 wk as two weeks Introduction: Okay Case Presentatuion: 1. blood pressure was 147/105 mmHg. Was BP measured with manual cuffs or electronic cuffs at the time of presentation? Outcome and follow up: as mentioned in the abstract. Discussion: 1. first paragraph of Discussion seems repetitive with Introduction portion. 2. There were only six prior cases of appendiceal bleeding as per your literature review. Are seven cases(including yours) sufficient to say that "In terms of sex, males appear to be more susceptible". Please rephrase this statement. Conclusion: okay. Is consistent with the case and discussion.
