## SPECIFIC COMMENTS TO AUTHORS

The main clinical manifestation is depression, which is not commensurate with the situation. It can range from sullenness to grief and even stupor. Some patients will have obvious anxiety and motor agitation. In severe cases, psychotic symptoms such as hallucinations and delusions may occur. Some patients suffer from self-injury, suicidal behavior, and even death. Depressive disorders have a high prevalence and high disease burden, but the treatment rates are low, with less patients receiving effective treatment in many countries; however, the medical prevention and treatment of depression still has a low recognition rate. The most common sleep disorder associated with depression is insomnia. Insomnia and depression are closely related and share a bidirectional relationship with each other. The relationship between marital status and sleep in women with depression showed that marital status was related to sleep efficiency. Married women had better sleep quality and significantly lower sleep delay than unmarried women.   In this study, the authors investigated the relationship between the designed questionnaire items and depression and analyze the factors related to depression. The study is very well designed. The questionnaire is interesting and reasonable. The results are interesting and well discussed. After a minor editing, this study can be accepted for publication. Thank you.

## SPECIFIC COMMENTS TO AUTHORS

In the introduction part of the article, the purpose of the article should be strengthened a little more with the information in the literature.

## SPECIFIC COMMENTS TO AUTHORS

I've found this paper interesting, clear and well written.  I only have some minor suggestions  Discussion ""Some studies have shown that the number of years of education were associated with the recurrence of depression, and the shorter the years of education, the greater the possibility of depression recurrence…"  Please cite these studies   Conclusions "We demonstrated that education, exercised, kinds of insomnia, habit of 1 hour before bed, diagnosed depression and coronary heart disease affect the depression..."   please correct exercise
