SPECIFIC COMMENTS TO AUTHORS

The paper is focused on relevant topic, specifically the impact of Covid 19 with the aim to investigate the impact of the COVID-19 pandemic on the ED visits and hospital admissions within one year in patients who underwent KT in Thailand. The manuscript is clear and presented in a well strustured manner. The study is well designed. Materials and methods are described in detail. Results are reported clearly and appropriate. The discussion is adequate. The conclusions are consistent with the evidence. The ethics statements and data availability statements are adequate. Just minor but that can improve the significance so would reccomend to introduce and discuss the role of telemedicine in the management of patients in pandemic settings.

SPECIFIC COMMENTS TO AUTHORS

Well written good focused on admission of KT patients on emergency department during covid-19 pandemic. The management of patients after KT is complex and resource-intensive. This study is valueable to understand behaviour of KT patients. The authors can add the study below as a references to increase the value of content introduction section. Sarier M, Demir M, Goktas S, et al. Results of Real-time Multiplex Polymerase Chain Reaction Assay in Renal Transplant Recipients With Sterile Pyuria. Transplant Proc. 2017;49(6):1307-1311. doi:10.1016/j.transproceed.2017.02.051.
