SPECIFIC COMMENTS TO AUTHORS

Surgical resection of brain glioma is mostly used therapy for the treatment of brain glioma. However, damage to functional areas of brain may usually occur due to the special location of brain glioma leading to high incidence of complications and even death. Unfortunately, few studies discussed the usage of comprehensive nursing in patients with brain glioma. In this study, the authors explored the efficacy of comprehensive nursing in patients who underwent operation for brain glioma and analyze its effects on the incidence of postoperative complications, psychological state and quality of life in patients with brain glioma. The study is very well written. The results are interesting and well discussed. A minor editing is required before final publication of the study. Thank you.
