## **SPECIFIC COMMENTS TO AUTHORS**

I think it is one of the most needed topics lately. Congratulations to the authors for addressing this issue. Although the article contains very clear statements, some points seem to be repeated due to the long explanation. I suggest that it be revised and shortened for completeness. If the content of the text is supported by sources, it will be much more evidence-based if the sources are cited in the text. As a result of this review, I would expect a brief conclusion on what should be done in Covid rehabilitation. What are the issues that individuals need to be supported in rehabilitation? How should these requirements be met? It would be very valuable to provide the reader with a clue regarding this. Also, are there any international activities on this subject? If so, how are they carried out? How would it be appropriate? What would you suggest for future work?

#### **SPECIFIC COMMENTS TO AUTHORS**

Rehabilitation is important for achieving universal coverage. Artificial intelligence and telerehabilitation may further the rehabilitation process. As a mini review, the manuscript brings all about rehabilitation, I found it publishable.
