SPECIFIC COMMENTS TO AUTHORS

Thank you for revising the manuscript according to my suggestion. The revised manuscript is improved. However, the following minor issues require clarification: 1. (P4L2-6) The “Patients and samples” section seems strange, which contains patients’ characteristics. Those information should be described in the Results section. 2. Figure 5 may cause confusing for readers. The position of arrows should be located not from “Prognostic information” but between “Cancer” and “Prognostic information”. Furthermore, the information regarding “Non-cancer” biopsy should not be described at the same figure. I recommend it is described only in the text.

SPECIFIC COMMENTS TO AUTHORS

The introduction was short, and the relationship between the immune system and cancer could have been explained a little longer. Patients do not have treatment information, and these factors should be added as they are effective factors in prognosis. Figures should be sequential in the text. The 'letters' on the figures are difficult to read, they should be corrected.

SPECIFIC COMMENTS TO AUTHORS

Thank you for revising the manuscript according to my suggestion. The revised manuscript is much improved. However, a following minor issue remains unresolved:

1. Information regarding “non-cancer” biopsy (159 samples) should be described in the main text.
