SPECIFIC COMMENTS TO AUTHORS

- Aim in abstract not quite clear - Grammar checking required. Paper was difficult to read - Sentence should not be started with a number in scientific writing e.g. 62 in the methods. Please check throughout - Still in abstract, the first a the phrase "consisting of" should be between study and 30 " - Last sentence of core tip should be rephrased and the words "thanks to this..." removed completed and in the discussion section - In the materials and methods, include country name at the end of Medical University of Silesia in Katowice - In the sentence All the patients underwent standard immunosuppressive therapy, including 95%... specify the number and not just the percentage. - What does ...5 mL per clot in ...5 mL per clot at the following time points: before mean? - -80 degrees Celsius and not -80 degrees of Celsius - Authors should elaborate on the ELISA assay, providing detailed description - Methods section should have a statistical analysis and subsection and not described in the results section - Statistics described in the results can be better written.

SPECIFIC COMMENTS TO AUTHORS

In this manuscript, the authors have evaluated Profiles of pro inflammatory cytokine levels (Interferon-gamma and Interleukin-2) in patients post allogeneic hematopoietic stem cells transplantation. While interesting in the field, this manuscript suffers from several drawbacks in study conception, technical execution and data presentation and, in my opinion, this manuscript in its current shape is not ready for publication. The main issues are as follows: 1-The manuscript must be carefully proofread for grammar, spelling, and punctuation issues. 2- It is recommended that authors improve the design of Tables and Figures. 3- The discussion part is not well written and needs a major rewrite. 4- Use of newer references is recommended. 5- The manuscript does not describe methods (e.g., experiments and data analysis) in adequate detail. 6- The Manuscript does not meet the requirements of biostatistics. In my opinion, this section is not well written and needs revision and rewriting.

SPECIFIC COMMENTS TO AUTHORS

Corrections and changes in the peer-review report were not highlighted in the manuscript's text. Also, the requested changes have not been applied in the method and material sections, discussions, and references. In my opinion, this manuscript is not ready for publication in its current shape.
