#### **SPECIFIC COMMENTS TO AUTHORS**

The authors discuss predictors of post-surgical infection. Predictors of postoperative infection and sepsis are considered to be very important factors for perioperative care providers. Although the data showed that these are significantly related factors, it is necessary to clarify why they are involved and to discuss them in the future.

#### **SPECIFIC COMMENTS TO AUTHORS**

Dear Hong-Zhi Wang, MD, Professor, this manuscript is well written but you should focus on the following comments 1. Regarding Institutional Review Board Approval Form or Document should be provide in english language. 2. in the discussion please do not repeat the results and P value should not be provide in this section. 3. Regarding the result section, I did not see any tables, figures and supplemnetary files, they mentioned only in the text!!!!!!??? 4. Rgarding the followup patients please write in detail. 5. Please provide a list of abbreviation used in the entire manuscript. 6. I think it is better to write a new paragraph in the method section regarding Surgical Technique in deatil. 7. The overall qulaity of the manuscript is good.
