

## Biostatistical Review Certificate

Dear Editor World Journal of Virology (WJV),

The study "Anatomophysiological relationships and consideration clinicals of tasting and smelling loss in patients with COVID-19" does not present a meta-analysis, therefore, it did not require a biomedical statistician.

Data related to the subject of this review were selected and extracted from the manuscripts by independent reviewers (Maria Fernanda Rossi Vigliar and Rogério Leone Buchaim), taking into account the characteristics of the individual studies that contributed to their outcome as well as their aggregated results, without the objective of performing a meta-analysis.

Kind regards,

Rogério Leone Buchaim
