SPECIFIC COMMENTS TO AUTHORS

The case reported for toe sarcoma is rare and attractive, dear authors, please note a few points: 1- Is there a picture of the tumor and the operation site? 2- Has abnormality genetics been checked for IDH1 and IDH2 genes? 3- Why whole body pet scan was not performed for metastasis workshop?

SPECIFIC COMMENTS TO AUTHORS

The authors present a case of Chondrosarcoma of the toe and performed a literature review. The title is correct and informative and respects the CARE checklist. However, I would suggest changing it to Chondrosarcoma of the toe: a case report and a literature review. The abstract is complete and informative and summarises the content of the manuscript in a good way. The case presentation is complete and so is the discussion. I have just a minor revision: " A search of the relevant databases resulted in five previously reported cases of chondrosarcoma of the phalanx": When a literature review is performed, it is mandatory to include: -which databases were used. PUBMED? EMBASE? - the keywords used for the review: chondrosarcoma? toe? -from which year to which year were the articles considered -inclusion and exclusion criteria for the review English revision is required
