SPECIFIC COMMENTS TO AUTHORS

This is a case report to address Leclercia adecarboxylata infective endocarditis in a man with mitral stenosis. There are only three reported cases of IE caused by L. adecarboxylata in the world. The mitral valve is often affected in IE, and the prognosis for IE with mitral valve lesions is often poor. That is interesting and helpful.

SPECIFIC COMMENTS TO AUTHORS

In this case report authors have discussed about a 51 year old patient with L. adedecarboxylata endocarditis. I have the following minor recs 1. Expand Echo to trans thoracic Echo in the imaging section 2. Describe how many blood cultures were obtained and how many of them were positive 3. Mention which all criteria's of modified duke were met 4. The discussion is extensive, unless the journal recommends the same the authors can remove redundant discussion and focus on the L. adedecarboxylata endocarditis. 5. PMID: 33190470, refer and cite about the risk factors and outcome in GN IE
