SPECIFIC COMMENTS TO AUTHORS

This article is very interesting and has potential to be published after minor revisions:

1.English language needs polishing. 2.In the text authors used TUR-bT and TUR-BT. In most of the literature TUR-BT is used (my recommendation). 3.In the Discussion section authors stated that intravesical explosion is common in TURP. This is not true statement. According to literature intravesical explosion in TURP is found in up to 0.2% cases. The intravesical explosion is very rare complications in both TURP and TUR-BT. 4.One of the problem of intravesical explosion with intraperitoneal bladder rupture is seeding of the tumor cells. Please, mention this in the text (part Discussion) with some comments and data from the literature.

SPECIFIC COMMENTS TO AUTHORS

Dear Authors; Thanks for reporting the manuscript entitled (Intravesical explosion during transurethral resection of bladder tumor : a case report and review of the literature)-Manuscript NO: 77819. The case is well reported but needs minor revisions. Important issues that should be addressed are listed below; 1. If the introduction would be expanded by adding more citations it would be better (not obligation). 2. Discussion is well described, but the sentence (some surgeons are used to performing cystostomies before complex transurethral resections. This can certainly increase the risk of bladder tumour dissemination but can avoid the accumulation of gas in the bladder) was not documented by citation, so this fact needs to be cited. 3. The manuscript should be revised according with the Care-checklist criteria. 4. No image regarding the case was depicted. 5. It would be wise If you add the conclusion heading separately.
