## SPECIFIC COMMENTS TO AUTHORS

Dear, Congratulations to the authors on their hard work in writing this very interesting case report. The manuscript is clearly written, well documented, but I have the following questions and suggestions for the authors:

1. Abstract - "An urgent abdominal CT scan revealed extensive pneumoperitoneum in her hilar system with extensive bowel wall necrosis". Did the patient have pneumoperitoneum or hepatic portal venous gas, or both?
2. Has a PCR-SARS CoV2 test been performed. COVID-19 infection may explain the overall clinical picture.
3. Have haemocultures been performed?
4. Did the patient have chronic renal failure? Alternative causes of troponin elevation should also be discussed.
5. It is necessary to discuss more extensively other reasons for acute mesenteric ischemia, apart from PCI, because the patient had hypotension and sepsis.
6. Figure 4-Delete patient data in photographs, if not already
7. Footnotes-„Informed consent statement: Informed consent has been obtained from the patient for publication of the case report and accompanying images“. How was the informed consent taken, since the patient had dementia and altered state of consciousness?

Best regards,

1. The main question for the authors would be: how can we be sure that abdominal vascular incident wasn't consequence of the patient's ill state and shock rather than PCI intervention? The same condition possibly precipitated the myocardial infarction, knowing the fact that the coronary vessels imaging didn't show any abnormalities? 2. You stated that the informal consent was obtained from the patient. How?
