

PEER-REVIEW REPORT

Name of journal: *World Journal of Clinical Cases*

Manuscript NO: 77928

Title: Subperiosteal orbital hematoma concomitant with abscess complicating ethmoidal mucocele: A case report

Provenance and peer review: Unsolicited Manuscript; Externally peer reviewed

Peer-review model: Single blind

Reviewer's code: 00070509

Position: Editorial Board

Academic degree: MD, PhD

Professional title: Professor

Reviewer's Country/Territory: South Korea

Author's Country/Territory: China

Manuscript submission date: 2022-05-29

SPECIFIC COMMENTS TO AUTHORS

Thank you for the opportunity to review this paper. I think this is an interesting manuscript entitled "Subperiosteal orbital hematoma concomitant with abscess complicating ethmoidal mucocoele: A case report." The manuscript is well written, the case presentation and discussion are clearly presented. This contribution provides a valuable perspective on sinusitis-derived subperiosteal orbital collection. However, I would like to make one suggestion to improve it: I recommend to change the title as "Subperiosteal orbital hematoma concomitant with abscess in patient with sinusitis: A case report."

SPECIFIC COMMENTS TO AUTHORS

Main Comment: Although, as a clinical description of a single case, this manuscript is of limited scientific value, it highlights a delicate medical condition (potentially leading to further spread of the infection) and its successful treatment. Illustrative pictures are also provided. **Additional Comments/Suggestions:** Discussion, first paragraph: "In addition to direct expansion and compression to the orbit, orbital complications of complicated mucocele, can also be caused by infection directly through congenital or acquired bony dehiscence or via the neurovascular foramina, or through the local valveless veins of the thin lamina papyracea resulting from a thrombophlebitic or embolic conditions" -> In addition to direct expansion and compression to the orbit, orbital complications of complicated mucocele can also be caused by infection directly through congenital or acquired bony dehiscence or via the neurovascular foramina, or through the local valveless veins of the thin lamina papyracea resulting from thrombophlebitic or embolic conditions. Discussion, second paragraph: "among which include 4 cases of sinus mucocele" -> including 4 cases of sinus mucocele. Discussion, third paragraph: "Concomitants of hematoma and abscess in the same area probably are a transitory condition and show the process of hematoma evolving completely into abscess" -> Concomitant hematoma and abscess in the same area probably are a transitory condition and show the process of hematoma evolving completely into abscess. Figure legend 2D: "white arrows" -> white arrow. Figure legend 3B: "a slightly bulging periorbital" - a slightly bulging periorbita? CARE Checklist: "The manuscript was Written according to CARE Checklist(2016)" -> The manuscript was written according to CARE Checklist (2016).
