Reviewer#1

Specific comments to authors: This is a review article that has an excellent choice of title, and the abstract summarize and reflect the work described in the manuscript. In regard of discussion in each section, interpretation of the findings were adequate and appropriate, highlighting the key points concisely, clearly and logically. Figures are sufficient, and good quality and appropriately illustrative of the paper contents. The citation and references were done appropriately. The manuscript was presented well in an easy, and understandable way. However, there are few grammar and spelling mistakes needs to be revised.

Answer to reviewer: Thank you for your kind feedback, we try to show the advances in wrist arthroscopy surgery especially the most and major advancement in surgery in Indonesia. Being a developing country, surgeons in this country determined to give the best therapy to their patients, we hope this article can shed new light for fellow physicians on choosing the best and most suitable therapy on their patients.

Reviewer#2

Specific comments to authors: Major revisions are needed. No surgical case-series are reported. It is not a review article.

Answer to reviewer: We apologize if our article does not look like the standard article review. Even so, we intended for this article to be considered as a literature review with additional opinions of author's experience in the field. This article provides a review of literatures discussing the arthroscopic techniques and their application in wrist surgery. The authors analyzed and compared the literatures with their experiences and outlined the difficulties or challenge in the procedures.
