SPECIFIC COMMENTS TO AUTHORS

As an extramedullary form of proliferating myeloblasts, granulocytic sarcoma (GS) is common in patients with acute myeloid leukemia (AML). GS in the central nervous system is rare, and intraspinal space-occupying lesion caused by GS is even rarer. The authors present concise clinical case with all the relevant diagnostic and therapeutic information. Could be of interest to specialists working in this field.

SPECIFIC COMMENTS TO AUTHORS

The manuscript is well written and very interesting. Nevertheless, I have a few suggestions for authors which might be helpful for improving the scientific quality of the manuscript. Language improvement is required. Further, I understand that authors are non-native English speakers, so minor language polishing will enrich the content of the manuscript.
