SPECIFIC COMMENTS TO AUTHORS

The authors described the case of a patient diagnosed with CML whose disease underwent a sudden transformation to ALCL following partial cytogenetic remission and early molecular response with 7 months of imatinib treatment. To the best of the authors' knowledge, their patient is the first reported case of Philadelphia-positive ALCL transformed from CML. The manuscript is well-written and the novelty of the case report is high. I have no suggestions for revision, this is an excellent paper. Congratulations.
