### **SPECIFIC COMMENTS TO AUTHORS**

The multiple complications of ESD place higher demands on operating room nurses. They provide targeted psychological guidance to invalids before surgery, improve various preoperative preparations, and closely observe postoperative conditions, which contribute to the smooth progress of surgery. This study discussed the effect of PDCA nursing on improving the quality management of ESD surgery under gastrointestinal endoscopy and its impact on invalid SF-36 scores and negative emotions. This study provided a reference for the quality management of ESD surgery under clinical gastrointestinal endoscopy. The manuscript is very well written. The methods are clearly described, and the results are very interesting. Minor comments: 1. The manuscript requires a minor editing. 2. The references should be updated. 3. The limit of the study should be listed and discussed.
