SPECIFIC COMMENTS TO AUTHORS

The authors describe Atypical Takotsubo cardiomyopathy presenting as acute coronary syndromes which is quite interesting. overall, the article is well written. some points needs to be modified however: 1. mention the doses of drugs 2. it doesnt provide sufficient content to make a literature review. However, case report is sufficient.

SPECIFIC COMMENTS TO AUTHORS

Dear authors: Atypical Takotsubo cardiomyopathy presenting as acute coronary syndromes: a case report and literature review could be an interesting case to report, as you alluded in this article. The most parts of the manuscript have an acceptable spelling, grammar and syntax. However, before it becomes publishable, it still requires some improvement. Here are my comments:

- 1.The abstract must be included of background, case summery, and conclusion. You must arrange them by this maxim.
- 2.There are no keywords in your manuscript. For determining the correct and most appropriate keywords, you can use Medical Subject Headings (MeSH) or Google Keyword Planner.
- 3.You did not allude Core Tip in your manuscript.
- 4.The introduction is very short. The constructs and concepts in the introduction section are poor-organized and incomplete. Include more general and specific background in this section.
- 5.If there are any kinds of Laboratory examinations, you must mention them in table format with precise figures.
- 6.The case presentation must be included of Chief complaints, History of past illness, Physical examination, etc. You can download one of the accepted articles in the journal and see the format.
- 7.Most bibliographic citations which been used are more than 5 years old and obsolete. The authors must update and arrange the bibliography.

Important note: the manuscript has not been written with journal's standards.

SPECIFIC COMMENTS TO AUTHORS

Good work done by the authors by reporting an usual case of pheochromocytoma-induced atypical Takotsubo cardiomyopathy which can present with chest pain, the common presenting symptom for myocardial infection. I have marked few short coming in the manuscript which has been marked in the returned file. The grammar needs further polishing. The authors are requested to report on the reported incidence on pheochromocytoma-induced atypical Takotsubo cardiomyopathy. A small comment on how the patient was prepare for surgery. Also, what type of procedure was done(open versus laparoscopic vs robotic). what precaution and measures were taken operatively. comment on histopathological features of specimen. post-op medication. How frequently patient was followed. on each follow up what investigations were done.
