SPECIFIC COMMENTS TO AUTHORS

This paper reported a PIMM case whose life was extended by as long as 22 years, and literature overview attempted to explore predominate strategy relating to long-term survival outcomes. It suggested that the degree of surgical resection and maintain post-operative treatments by NDV-modified tumor vaccine, interferon and β -Elemene are helpful to prolong the survival rate and improved the life quality. The study can provide useful information for the reference of medical practitioners. But, there are several additional concerns about the paper, including: 1.The quality of Figure 4a, 4b, 4c, 4d are poor, especially the Ki67 picture, the hematoxylin counterstain is not enough, and the nuclei of the negative cells are not clearly displayed.Please improve the picture quality. 2.Please supplement the relevant picture data of the molecular test results such as FISH of this case. 3.Please add the picture of the PET-CT imaging data of this case. 4.There are still some minor grammatical and spelling errors throughout this manuscript.

SPECIFIC COMMENTS TO AUTHORS

This Manuscript has reported “The longest survival with primary intracranial malignant melanoma: a case report and literature review.” Overall, this Manuscript provides valuable and valid data. I do not see any major issues in this Manuscript; the Manuscript can only be accepted after minor revision. A few minor issues need to be addressed, as pointed below: 1-The manuscript must be carefully proofread for grammar, spelling, and punctuation issues. 2-It is recommended that authors improve the design of diagrams.
