SPECIFIC COMMENTS TO AUTHORS

1. Inclusion and exclusion criteria section should be revised, now it is a listing of numbered criteria. 2. References in results section are noted like: (Insausti2020, (Gu2018 and Insausti2020), and (Carnevale2016). This is not in line with the rest of the review. 3. My advice is to adjust sentence structure of the first line of each result section (lines 80-86, 96-103, 113-119, 130-137, 148-151, 163-166, 177-180 and add correct citations to these studies mentioned.

SPECIFIC COMMENTS TO AUTHORS

This is an interesting study of the prostate artery embolization on lower urinary tract symptoms related to benign prostatic hyperplasia. In this study, the authors performed a meta-analysis to evaluate the efficacy and safety of prostate artery embolization compared with transurethral resection of the prostate, which may help urologists make better choices. The study is well designed and the manuscript is well written. The manuscript requires a minor editing.
