

Revision Explanation

1. The authors should re-arrange the structure of the tables, and move them to the end of the text.

Explanation: The standard three-line table has been drawn as required, and each row or column in the table is aligned and moved the table to the end of the text.

2. The limit of the study should be discussed.

Explanation: Limitations of the study have been discussed and supplemented in the conclusion section.

3. In general, do not use non-standard abbreviations, unless they appear at least two times in the text preceding the first usage/definition. Certain commonly used abbreviations, such as DNA, RNA, HIV, LD50, PCR, HBV, ECG, WBC, RBC, CT, ESR, CSF, IgG, ELISA, PBS, ATP, EDTA, and mAb, do not need to be defined and can be used directly.

Explanation: The non-standard abbreviations in the title, abstract, keyword, main text and table have been modified as required and displayed in complete name when they first appear.

4. Please revise the references according to the [Format for References Guidelines](#), and be sure to edit the reference using the reference auto-analyser.

Explanation: References format has been revised according to the [Format for References Guidelines](#) which accords with publication specification.

5. About acknowledgements and conflict-of interest

Explanation: Author contribution statement has been supplemented based on all authors' actual job distribution and explained conflict-of interest of all authors.

6. If your manuscript is an Original Study (Basic Study or Clinical Study), Meta-Analysis, or Systemic Review, the "Article Highlights" section is required.

Explanation: As an original study, the "Article Highlights" has been written in accordance with the Guidelines and Requirements for Manuscript Revision.

7. Please upload the approved grant application form(s) or funding agency copy of any approval document(s). Before final acceptance, when revising the manuscript, the author must supplement and improve the highlights of the latest cutting-edge research results, thereby further improving the content of the manuscript.

Explanation: This revision has supplemented and improved the latest research results on diffuse large B-cell lymphoma according to the RCA database.

8. Requirements for Article Highlights: If your manuscript is an Original Study (Basic Study or Clinical Study), Meta-Analysis, or Systemic Review, the “Article Highlights” section is required.

Explanation: Additional article highlights have been prepared in accordance with the Guidelines and Requirements for Manuscript Revision.
