Title: Liver function in transgender persons: challenges in the COVID-19 era

Responses to Reviewers/Editors

[1]. Reviewer #1:

Specific Comments to Authors: As mentioned poor numbers may not allow to confirm the authors view. But a multinational multicentric study may throw a better light.

We thank the Reviewer for his/her comment. A relevant remark has been added at the end of the revised text as follows: “A multicentric study may contribute to a deeper knowledge about this issue. The pandemic can be an opportunity to provide equal opportunities to care for all and increase the resilience of the transgender population”

[2]. Reviewer #2:

The Reviewer has not suggested any corrections/changes.

[3]. Science Editor:

The Scientific Editor has not put forth any suggestions/changes.

[4]. Company Editor-in-Chief:

I recommend the manuscript to be published in the World Journal of Clinical Cases. Before final acceptance, the author(s) must add a table/figure (medical imaging) to the manuscript. Before final acceptance, when revising the manuscript, the author must supplement and improve the highlights of the latest cutting-edge research results, thereby further improving the content of the manuscript.

Two tables and two figures have been added in the revised version of the manuscript; we believe that they help to highlight the main issues addressed in the paper. The text already includes the latest cutting-edge research results (it has to be noted that this information in the medical literature is rather sparse/limited).
