SPECIFIC COMMENTS TO AUTHORS

I would like to thank you for inviting me to review this manuscript. In the present study, a narrative technique was used to explore available rehabilitation facilities for patients with neurogenic bladder after spinal cord injury. In my view the research idea is of great interest but the study could benefit from more precision. This would enhance the quality of the study and interest to the scientific community. 1. The format and structure of article should be improved as is mentioned in the author guideline for manuscript submission. 2. I can't find the materials and method section. This section can effectively include some information concerning search strategy and the narrative technique. 3. It is suggested that the discussion section be reconsidered in terms of study limitations. 4.

A conclusion section should be added to the end of the article. This section can be briefly described the implications of the study, followed by recommendations for future studies. 5. Finally, I suggest that the manuscript is proofread by a native English speaker or Editing service. So please make sure there are no English errors.

SPECIFIC COMMENTS TO AUTHORS

These are basic information about routine nursing care for patients with neurogenic bladder following spinal cord injury. Perineal care and catheter toilet for patients with indwelling catheter should also be emphasized. The use of suprapubic catheter versus transurethral indwelling catheter is also worth mentioning.
