SPECIFIC COMMENTS TO AUTHORS

It is a nice case report, well done with an update references. However it will be necessary to improve the english quality of the text.

SPECIFIC COMMENTS TO AUTHORS

The manuscript is very interesting and I think that it will be of great benefit in making therapeutic decisions in such severe cases of irAEs. The article is very well illustrated. In the abstract section- abbreviations are used without explanation which is abbreviated. In History of present illness section- consider not using trade names of drugs and pharmaceutical brands. Correct the dates included in figure 1's description. There are some misspellings.

SPECIFIC COMMENTS TO AUTHORS

Dear authors, I have read with great interest your case report. Indeed, ICI induced-colitis can be a life-threatening side effect and early recognition can be a game-changer. I find it very important to state that surgery can be an option in these patients, and it should not be postponed in medical treatment non-responders in order to lower mortality. The message from this case report is very important for clinical practice. However, the English used in the manuscript needs serious check-up as there are many grammar errors. Secondly, could you explain better why the surgical decision was to perform a subtotal colectomy with ileostomy and not a left-sided hemicolectomy? Is there any literature supporting this approach? This explanation should be found in the discussions section.

SPECIFIC COMMENTS TO AUTHORS

This case report is a routine complication and treatment method, which is not innovative.
Not recommended for publication.
