

RESPONSE TO REVIEWER'S COMMENTS

Reviewer's comment	Response
Typo error in title	Corrected
Abstract: Grammar revision is recommended	Done
Introduction: 1- "A strong association was observed between the magnitude of antibody response and patient survival, disease severity and fatal outcomes" Kindly add a source	Source added
In introduction section you mention that the total number of patients is 493, is it OK?	Yes
Methods: You should specify how did you get the serological (IgM IgG) results; Did you retrospectively retrieve the documented results (if so then you should mention in inclusion criteria that the patients only who had those results in the medical files) OR did you perform the serology tests in the stored serum samples?	Serological results were retrieved from the patients' files. Inclusion criteria added as suggested.
Results: 1-In table 1 why do you record both mean and median in some values? 2- Some figures (eg, 5,6) could be replaced by table or tables to be more clear.	Table corrected and means removed. Median kept as the data is skewed. In the main text, we have kept only upto Fig 4. We would like to know if the reviewer means supplementary figures.
Language polishing	Done
