

Addressed Reviewer Comments

Reviewer 1

- Abstract was edited to be more concise
- Baseline patient characteristics are already included in the study, include age, gender and ethnicity. Severity and etiology of disease could not be described as this information is not available in the utilized database.
- Text was reviewed and grammatical errors corrected
- Introduction, results, and discussion were further elaborated upon
- Selection criteria for patients was already included in the methodology, and was pursuant to the topic being studied. Specifically, we chose patients with gout, and further stratified based on the presence of cirrhosis. No further clarification is necessary for this.

Reviewer 2

- The fact that the data obtained lacks clinical significance was addressed.
- Edits, including certain percentages in the body of the text corresponding to the values in the tables, were addressed and fixed.
- Table headers and abbreviations were addressed. References were edited and sorted.

Reviewer 3

- Language and grammar was edited
- The two sources were not added as we felt that they did not add more to the topics discussed in either the introduction or discussion sections
- Results were organized
- Further detail was added to the discussion section
