SPECIFIC COMMENTS TO AUTHORS

Dear Authors, this an interesting case presenting the complexity of differential diagnosis in bleeding intracranial malignancies. The extensive diagnostic work-out of your case and intellectual background support the conclusion that brain tumors may be misdiagnosed if covered by hemorrhage and characteristics of perihematoma edema may lead to differential diagnosis. In order to optimize the grammatical and structural quality of your paper I suggest the revision by a native English speaker. Best Regards

SPECIFIC COMMENTS TO AUTHORS

Specific comments to authors: 1. English editing is needed through all the manuscript 2. The authors must define each abbreviation before its first use in the text 3. Abstract: The authors should elaborate a short coherent abstract respecting the order of CARE checklist: Don't separate sentences with titles (Patient concerns, Interventions, Diagnosis..) 4. Key words: use MeSH terms 5. Introduction: References should be reordered The years of these percentages must be indicated: incidence.. 3.7 to 7.2%... Define the abbreviation of CT 6. Case presentation: Define the abbreviation of MRI 7. The authors should respect this order to describe the case: Patient information including past history / Clinical Findings/ Diagnostic Assessment/ Therapeutic Intervention/ Follow-up and Outcomes 8. Assessing the case presentation objectively avoids emotions: Unfortunately! 9. Conclusion: to avoid repetition , the author should elaborate the "take-away" lessons of this case report in a one paragraph conclusion
