

I want to thank the reviewers and editors for your time, comments and efforts

<p>. In this case, old age, AKI, and severe illness condition should be the main risk factors for the ciprofloxacin-related hypoglycemia, which would be elaborated more in discussion section.</p>	<p>Thank you for your comments.</p> <p>Further elaboration has been added to the discussion in the 7th paragraph.</p>
<p>On the other hand, levels of blood C-peptide and insulin were not examined during the period of using ciprofloxacin, which should be a limitation for explaining the mechanism of hypoglycemia caused by ciprofloxacin.</p>	<p>Thank you for your comments.</p> <p>At admission time, we did a quick literature review, concluded ciprofloxacin induced hypoglycemia after administration of 2 doses, and stopped immediately. We didn't consider blood C-peptide and insulin levels as additional support and evidence for ciprofloxacin side effects.</p>
