SPECIFIC COMMENTS TO AUTHORS

The authors show the case of giant teratoma with isolated intestinal duplication in adult. The case presentation is so interesting, however, I have some concerns to discuss. -What is the novelty of this case? -What are the blood test findings? -What is the clinical relevance? -The clinical manifestations of intestinal malformations are diverse and difficult to diagnose preoperatively. What should we do? What should we do? What are the countermeasures?

SPECIFIC COMMENTS TO AUTHORS

This manuscript aims to report a rare case of a giant teratoma with intestinal duplication, which has not been reported previously in the scientific literature. The topic is relevant and the manuscript rigorous, but there still exists some space for text improvement. The third sentence of first paragraph and the second sentence of second paragraph of the DISCUSSION section should have a reference. In addition, I suggest adding more paragraphs including future directions in clinical practice challenges of the surgical treatment of this case.
