

Answering Reviewers

Reviewer #1:

Question: A major limitation is the small sample size

Answering: We are very sorry about the small sample size, and we will make more efforts to collect case samples in the future.

Reviewer #2:

Question1: The study requires more descriptive data. I would advise to add a table of descriptive statistics.

Answering: We have supplemented the statistics of relevant descriptive data.

Question 2: There is no data on the age, sex, BMI and other basic criteria important during procedure.

Answering: We have added related data on the age, sex, BMI and other basic criteria important during procedure.

Question 3: Please add them or provide data why t-test were not included in the analysis.

Answering: We have added t-test in the analysis.

Question 4: Duration of treatment and dosage on vasodilator and anticoagulant therapy after surgery.

Answering: The control group was given prophylactic anti-infective therapy (within 30 minutes before surgery), and both groups were given vasodilator and anticoagulant therapy after surgery. Among them, the antiplatelet drug was bayaspirin or clopidogrel, and the anticoagulant drug was warfarin or rivaroxaban, the specific medication plan, time and dosage should be determined according to the patient's comprehensive condition.
