### SPECIFIC COMMENTS TO AUTHORS

Authors summarize the current understanding of molecular signalling associated with the maintenance and regulation of CSCs in tongue squamous cell carcinoma in order to emphasize the need to get deeper understanding to unravel novel targets. The paper is focused on a relevant topic. The manuscript is clear and presented in a well structured manner. I kindly ask to complete the discussion considering the role of PD L1 in this context with the important questions/implications related to the progression from dysplasia to carcinoma and the management of the specimens as well as the assessment by the pathologist, given the important effects on prognosis and therapy. In this regard quote: - Atlas of PD-L1 for Pathologists: Indications, Scores, Diagnostic Platforms and Reporting Systems. J Pers Med. 2022 Jun 29;12(7):1073. doi: 10.3390/jpm12071073. ### SPECIFIC COMMENTS TO AUTHORS

This article focuses on tongue squamous cell carcinoma and summarizes signal transduction pathways and markers related to cancer stem cells. It introduces the findings related to these while citing relatively recent papers and I believe that they are of a certain value.

- Does CD44v8 exist? (page 4 line 7) Reference No.6 describes CD44v8-10, which is a variant containing three consecutive exons v8, v9, and v10.
- References should be correctly listed. Papers that should be described with Article ID are not described as such. Examples: References Nos. 27, 28, 32, 33, 34, 38, 41, 43, 52, 55, 76, and 85. Reference No. 7 does not include the name of the journal. The doi of reference No. 9 is incomplete. Reference No. 69 has no page numbers or article ID.
- The figures are all too general. It should relate to the events observed in tongue squamous cell carcinoma (TSCC), and the diagram should be made so that the role of each signal pathway in TSCC can be understood.

## SPECIFIC COMMENTS TO AUTHORS

The points pointed out in the previous report have been improved, and the manuscript is considered acceptable. There are some typos in the text, which I recommend be corrected. Page 1, line 10 & 15: Adadvanced -> Advanced Page 5, line 16: mostspecific -> most specific Page 7, line 14 & 18: HNSSC -> HNSCC Page 8, line 8: Krueppel -> Krüppel Reference 29: The trailing "IDENTIFICATION" should be removed. Regarding the figure, the only thing that concerns me is the illustration of the transmembrane receptors. Frizzled and SMO are thought to be 7-transmembrane type receptors, and Ptch is thought to be a 12-transmembrane type receptor, so I think it would be better if the illustration reflected these facts.
