Science **Editor:**

The manuscript has been peer-reviewed, and it's ready for the first de cision.

Company Editor-in-Chief: I have reviewed the Peer-Review Report, the full text of the manuscript, and the relevant ethics documents, all of which have met the basic publishing requirements of the World Journal of Clinical Cases, and the manuscript is conditionally accepted. I have sent the manuscript to the author(s) for its revision according to the Peer-Review Report, Editorial Office's comments and the Criteria for Manuscript Revision by Authors. Before final acceptance, uniform presentation should be used for figures showing the same or similar contents; for example, "Figure 1 Pathological changes of atrophic gastritis after treatment. A: ...; B: ...; C: ...; D: ...; E: ...; F: ...; G: ...". Please provide the original figure documents. Please prepare and arrange the figures using PowerPoint to ensure that all graphs or arrows or text portions can be reprocessed by the editor. In order to respect and protect the author's intellectual property rights and prevent others from misappropriating figures without the author's authorization or abusing figures without indicating the source, we will indicate the author's copyright for figures originally generated by the author, and if the author has used a figure published elsewhere or that is copyrighted, the author needs to be authorized by the previous publisher or the copyright holder and/or indicate the reference source and copyrights. Please check and

confirm whether the figures are original (i.e. generated de novo by the author(s) for this paper). If the picture is 'original', the author needs to add the following copyright information to the bottom right-hand side of the picture in PowerPoint (PPT): Copyright ©The Author(s) 2023. Please upload the approved grant application form(s) or funding agency copy of any approval document(s). Before final acceptance, when revising the manuscript, the author must supplement and improve the highlights of the latest cutting-edge research results, thereby further improving the content of the manuscript. To this end, authors are advised to apply a new tool, the RCA. RCA is an artificial intelligence technology-based open multidisciplinary citation analysis database. In it, upon obtaining search results from the keywords entered by the author, "Impact Index Per Article" under "Ranked by" should be selected to find the latest highlight articles, which can then be used to further improve an article under preparation/peer-review/revision. 	The 'INTRODUCTION' section clearly describes the relevant	[Y]
	background information for the study. Only the most relevant and	
	current (within the past 5 years) literature is cited, with the exception	
	of rare instances of seminal literature citations. All technical terms	
	and/or abbreviations are explained and/or defined, with the full	
	name of abbreviations given upon first appearance in the text and the	
15	abbreviation presented in parentheses [i.e., "computed tomography	
	(CT)"]. First-person pronouns (e.g., 'I', 'we') are used appropriately to	
	clearly indicate the work performed by the author(s). When	
	weaknesses of previous studies are described in the text to highlight	
	the innovations related to the current study, the information is	
	presented carefully.

	The 'MATERIALC AND METHODS' section clearly and accurately	
16	The 'MATERIALS AND METHODS' section clearly and accurately	[NI]
10	describes all materials and methods used to obtain the data presented	[N]
	in the article and is adequate for a reader to repeat the study.	[3/]
	The 'RESULTS' section concisely describes the observational and	[Y]
	experimental results. Representative data and data that have scientific	
	significance are emphasized. Data is presented in either the text, a	
17	table or figure (i.e., chart, diagram, graph or image), but is not	
	repeated among each. Information presented in the tables and figures	
	clearly describes the trends, meaning, and inferences. Results	
	described in textual form are accurate, concise and clear.	
	Statistical symbols are accurate. Statistical significance is expressed as	[Y]
	$^{\mathrm{a}}P$ < 0.05, $^{\mathrm{b}}P$ < 0.01 (P > 0.05 usually does not need to be denoted). If	
18	there are other series of P values, ^{c}P < 0.05 and ^{d}P < 0.01 are used, and	
	a third series of P values is expressed as $^{\rm e}P$ < 0.05 and $^{\rm f}P$ < 0.01.	
	Statistical data is expressed as mean ± SD or mean ± SE.	
	The 'DISCUSSION' section (1) describes the main purpose and	[Y]
	hypothesis of the study; (2) summarizes the most important results; (3)	
	illustrates and explains the results (but does not simply repeat the	
10	data) and draws conclusions or inferences based on the results; (4)	
19	points out the limitations of the study and their impact on the results,	
	as well as proposes further advice on future research topic(s) or	
	direction(s); and (5) describes the theoretical significance and practical	
	value of the findings.	
	The 'ACKNOWLEDGEMENTS' section expresses gratitude to any	
	individuals or organizations for technical support (i.e., providing	
20	instrumentation, equipment or experimental materials, and/or	
20	assistance in experimental work), non-technical services (i.e., useful	[N]
	inspiration, suggestions, guidance, or review), and/or any other	
	auxiliary work.

	articles in accordance with the specified format.

	The 'REFERENCES' section lists the references in the Vancouver style.	[Y]
	This style uses Arabic numeral in-text citations based on the order of	
	the first appearance of a source in the text. For citations where the	
	author's name is indicated in the text, a superscript number should be	
	placed following the name (i.e, "Pang et al"). For citations where no	
22	author is indicated, a superscript number should be placed at the end	
	of the sentence. Respective examples are: "Ma ^[1] reported", "Pan <i>et</i>	
	al ^[2-5] indicated"; "PCR has a high sensitivity ^[6,9] ." No superscript	
	numbers are used when the reference number is described in the text;	
	for example, "The experimental method used has been described in	
	reference [8]." The style of reference citations in tables is the same as	
	that in the text (e.g., Pan et $al^{[2-5]}$, please see reference [8]).	
	Journal references have been verified to ensure that there are no	[Y]
	duplicate references and that the PMID numbers are correct. For	
	references not yet included in PubMed: the name of Chinese journals	
0.0	is spelled out using Chinese Pinyin, with the first letter of each word	
23	capitalized (e.g., Shijie Huaren Xiaohua Zazhi); the name of journals in	
	other languages are listed according to indexing information retrieved	
	from Google. Book references are presented with all the information	
	relevant to the electronic version.	
	The number of cited references is appropriate for the article type, as	[Y]
	follows:	
	Commentary: no less than 50;	
24	Review: no less than 100;	
	Article: no less than 30/26;	
	Case Report and Letter to the Editor: no less than 1.

25	manuscript type (e.g., Manuscript NoInstitutional review board	[N]

2 6	The names of the peer reviewers and the scientific editor are present at	[Y]
	the end of the paper (<i>e.g.</i> , P-Reviewer: Hugot D S-Editor: Wang JL).	
	The order and numerical labeling of tables and figures is consistent	[Y]
	with their appearance and presentation in the text. Symbols in tables	
	(e.g., +, -, ×, ÷, *) correctly correspond to the definitions in the	
27	footnotes. Only one legend is provided for each multi-panel figure
