SPECIFIC COMMENTS TO AUTHORS

I carefully read the minireview developed by your team and found that in some places it is interesting and welcome. However, the title should be changed and should refer only to tumors of the breast or genital organs secondary to liver transplantation as you state in the introduction. Later, in the description of the tumors that appear, those that appear after the transplantation of other solid organs, not only the liver, are also described, which creates confusion and contradictions with what is stated in the introduction. The screenings described later for this type of cancer are no different from the screenings that are usually done for these cancers according to current guidelines. The conclusions are excessive, lacking in clarity and are not entirely the result of what was previously described in the minireview. There are studies on neoplasias secondary to organ transplants, but these are also quite controversial and approached with caution because they do not clearly prove that the newly appeared tumors are, in fact, secondary to solid organ transplantation. That's why the guidelines avoid imposing a special screening line for these so-called post-transplant neoplasias.

SPECIFIC COMMENTS TO AUTHORS

It is recommended to include the incidence of PTLN after transplantation, monitoring methods and precautions during follow-up.

SPECIFIC COMMENTS TO AUTHORS

This revised version of the manuscript brings the necessary clarifications to understand much better where its elaboration started and what was found in the end. From my point of view, the changes requested by me have been made and, as a result, the manuscript can be published in its current form.
